

Warsaw; March 8, 2005

Dear Young Scientists in Bangladesh,

I am very happy that your country has decided to establish the Bangladesh Science Olympiad that includes also a competition in physics, my favorite hobby. Such Olympiads exist in many countries. It is the most efficient tool for finding gifted and talented young people. It is well known that the human resources are more important than any natural resources such as petroleum, minerals, valuable plants, etc. as right the people create better future. Moreover, the human resources are not limited, while the natural resources will expire some day.

At present many past winners in the national Physics Olympiads in different countries are very well known scientists. It is worth to underline that the fraction of especially gifted and talented people in any nation is the same. The most important is to get believed that you are good, good also in physics. Try to participate in your Physics Olympiad! Compare your knowledge with knowledge of your colleagues from other provinces, from other schools, other cities or villages! Have a pleasure of winning the Olympic trophies! I wish you and all involved in organization of the competition many successes!

I hope that some day your country will participate in the International Physics Olympiads. Perhaps then I will have a pleasure of meeting you.

All the best again!

Waldemar Gorzkowski
President
International Physics Olympiads
